Mighty Maisy Maze Division RoboCup Junior

About the Team

Organisation:

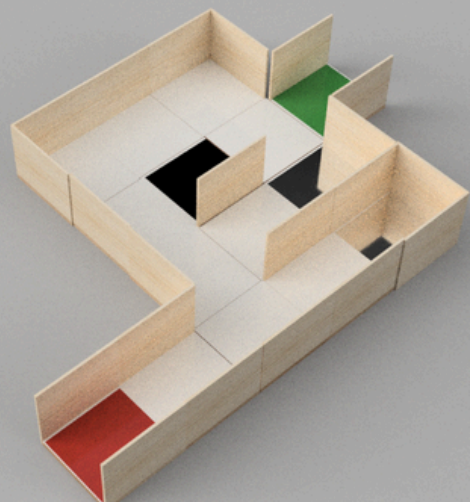

BBC

Coder:

Euan

Builder:

Lawson

Challenge Encountered

After regionals we had problems with the wheels rubbing against the gear, so we changed it to have the gears enclosed in two Lego parts. After regionals we also changed the code because we wanted the robot was to move tile by tile. We also encounter a problem when sometimes when we started the code it would show the error code ENDEV for no reason and you would have to keep trying to pressing the start button till it started.

Interesting and Innovative Features

We use three bigger gears and two smaller gears on each side of the robot because if we didn't have them we would have to get two more motors attached to the robot and we don't have enough ports for that. We also have two LRFs on our robot to be able to see every angle and for more accuracy.

Lessons Learnt

We learnt that if we encounter a problem, we will use it as a learning opportunity, so if we ever have the same problem again, we know how to fix it. This year we also learnt and transitioned to python using a spike hub.
